Re: Resource Conservation and Recovery Act (RCRA)
(follow-up) Inspections

Mr. Trombold:

On September 12 and October 1, 1985, RCRA follow-up inspections of your T/S/D facility (ID#KSD007246846) were conducted by this department to determine compliance with state and federal regulations concerning hazardous waste, and, specifically, compliance with the terms of my RCRA letter to you dated July 9, 1985.

Based on the information provided during the inspection, your facility, at the time of the latter inspection, was found to be in substantial compliance with the state and federal hazardous waste regulations.

The storage conditions of your hazardous waste drums have been upgraded to eliminate precarious stacking; and you have agreed to store drums in the processing area (near the storage tanks) for no longer than one day, to eliminate need to include this area on the inspection schedule.

Your cooperation with the Hazardous Waste Management Program is appreciated. If you have questions concerning the inspection, please call me at (316) 651-5529.

Sincerely,

Dale T. Stuckey
